Revocation Configuration

Array Configuration

Online Responder Configuration

Use this snap-in to configure and manage one or more certificate revocation responders.

Overview

The Online Responder Management snap-in helps you configure and manage online certificate status protocol (OCSP) responders with one or more certification authorities. Use this tool to:

- Manage certificate revocation configurations for an Online Responder Array.
- Monitor the operating status of each member of an Online Responder Array.

Manage Online Responder Array members

Revocation Configuration Status

The Status pane identifies Online Responder configurations that are working properly or that may need administrator attention. To get more information, select the Array members. Note: You may need to click Refresh if recent configuration changes or other administrative actions are not represented here. [For more information, see Verifying that a revocation configuration is functioning properly.](#)
